

> Industry 4.0

The Short Master Industry 4.0 dedicated to the Companies of the Industrial District of Suzzara-Pegognaga successfully concluded with the participation of **BRAR Team**.

The training course has given the opportunity to business managers and entrepreneurs to learn about the different aspects that this innovation is generating at the market level and in the opportunity of transforming companies, acquiring culture and strategic skills to lead in new scenarios. The participants visited the realities where innovation and Industry 4.0 have already been applied.

> See Brar on TV.

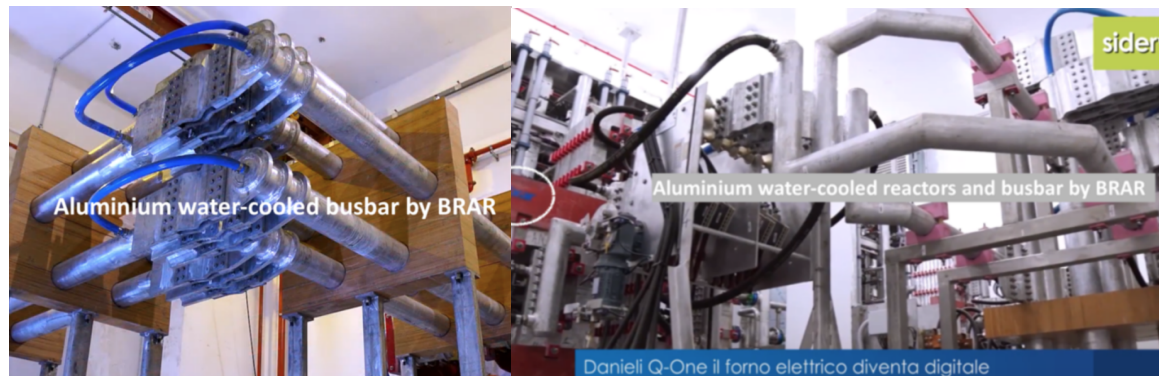

We are pleased to share the videos of Danieli Automation Q-ONE at Sisak plant, where BRAR made the design and manufacturing of water cooled Aluminium busbars and reactors, including a special wood supporting "bridge" between existing and new buildings.

Q-ONE is a new "Digital furnace" where the power unit is able to run conventional

AC EAFs without generating the problems caused by reactive power, flicker and harmonics to the network.

> New deliveries

BRAR successfully completed factory cold tests of several projects, including one set of the Power Conducting Arms for Daido Steel in Japan in cooperation with Sumitomo, one high current busbar for rockwool electric arc furnace, one high current secondary circuit for Bokaro Steel made by Brar India. We also have performed hot tests and commission for DC smoothing reactors at ABS plant.

1NECABLE ONE LOVE

We wish a Merry Christmas and Happy New Year!!

We keep running, working hard and looking forward for new challenges!
